

FAIZ MUHAMMAD

Senior .NET Developer | Enterprise SaaS | Banking | FinTech | Payment Systems
faizmuhammadmarri@gmail.com | +92-303-2213801 | linkedin.com/in/faiz-mari | faiz-baloch.github.io/Fai-M-Mari
| Karachi, Pakistan (Open to opportunities in GCC , Singapore, Europe and Pakistan)

PROFESSIONAL SUMMARY

Senior .NET Developer with 5+ years of experience designing, developing, and modernizing enterprise-grade backend applications across Enterprise SaaS, Banking, FinTech, Digital Payments, and UAE Government Digital Transformation projects. Proven track record of delivering scalable ASP.NET Core applications, integrating enterprise payment gateways, optimizing high-volume transaction processing, and driving measurable business outcomes, including a 96% performance improvement, 40% reduction in maintenance effort, and 35% faster API response times. Strong expertise in Clean Architecture, Domain-Driven Design (DDD), CQRS, Multi-Tenant SaaS Architecture, REST API development, and secure enterprise integrations. Experienced collaborating with cross-functional teams to deliver scalable, secure, and high-performance business-critical platforms. Committed to building secure, scalable, and maintainable enterprise solutions while continuously strengthening expertise in cloud-native engineering, Microsoft Azure, Docker, Kubernetes, and modern DevOps practices.

TECHNICAL SKILLS

Languages & Frameworks: C#, .NET 8/.NET 9, ASP.NET Core MVC, ASP.NET Core Web API, Entity Framework Core, LINQ, ADO.NET
Frontend Technologies: Angular, Blazor, HTML5, CSS3, Bootstrap, JavaScript, TypeScript, jQuery
Architecture & Patterns: Clean Architecture, Domain-Driven Design (DDD), CQRS, MediatR, SOLID Principles, Repository Pattern, Unit of Work, Dependency Injection, Microservices, Multi-Tenant SaaS Architecture, RESTful API Design
Authentication & Security: JWT Authentication, ASP.NET Core Identity, OAuth 2.0, Role-Based Access Control (RBAC), Secure API Design
Cloud & DevOps: Microsoft Azure (App Service, Azure Functions, Azure DevOps), Docker, Kubernetes, CI/CD Pipelines, Git, Bitbucket
Databases & Caching: SQL Server, Oracle Database, T-SQL, Entity Framework Core Migrations, Stored Procedures, Query Optimization, Redis (Distributed Caching)
Messaging, Logging & Background Processing: Hangfire, SignalR, RabbitMQ, SendGrid, Background Services, Serilog
Payment Integration & FinTech: Payment Gateway Integration (Ngenius, UAE Pay, Stripe, Naqodi), Digital Payments, Payment Processing, Merchant Onboarding, Banking APIs, KYC/AML Integration, Secure Payment Integrations
API Development & Integration: REST APIs, Third-Party API Integration, Swagger/OpenAPI, Postman, JSON, Webhooks
Testing & Development Tools: xUnit, NUnit, Unit Testing, JIRA, Agile/Scrum, SSRS, SSIS

CORE COMPETENCIES

- | | | |
|-------------------------------|----------------------------|-----------------------------|
| • Enterprise SaaS Development | • Banking Systems | • FinTech Solutions |
| • Digital Payments | • Backend Engineering | • Clean Architecture |
| • Domain-Driven Design | • CQRS | • Multi-Tenant Architecture |
| • REST API Development | • Enterprise Integration | • Performance Optimization |
| • Secure API Development | • Cloud-Ready Applications | |

PROFESSIONAL EXPERIENCE

Senior .NET Developer — Payment Integrations & Legacy Modernization

Smart Works for Information | Abu Dhabi, UAE | May 2025 – May 2026

- Integrated four enterprise payment gateways (Ngenius, UAE Pay, Stripe, and Naqodi) into a legacy VB.NET MLS and ticketing platform, enabling secure, PCI-compliant digital payment processing for high-volume public event transactions.
- Modernized three mission-critical UAE Ministry of Energy & Infrastructure services from legacy .NET to ASP.NET Core 8, reducing maintenance effort by 40% while improving long-term platform stability and maintainability.
- Architected a configuration-driven ASP.NET Core middleware platform with unified API endpoints capable of dynamically executing stored procedures, enabling scalable JSON-centric integrations without application redeployment.
- Implemented SendGrid transactional email integration for automated payment confirmations and compliance notifications, reducing manual outreach by an estimated 80%.
- Developed a Jira-inspired Smart Help Desk System using ASP.NET Core MVC, C#, SQL Server, Entity Framework Core, and SignalR, supporting ticket management, project tracking, sprint workflows, user management, dashboards, and enterprise reporting.

.NET Developer — Government Digital Transformation & Enterprise Systems

HNW Research and Management | Abu Dhabi, UAE | May 2024 – May 2025

- Architected and delivered an enterprise Customer Experience Improvement Hub serving 12 Abu Dhabi government entities, supporting 200+ KPIs, configurable workflows, and centralized performance monitoring.
 - Built real-time project progress dashboards with Gantt chart visualisations for government programme managers, improving cross-entity project visibility and decision-making.
 - Designed and implemented a digital services catalogue with role-based access and configurable service templates, streamlining public sector service onboarding.
 - Optimized enterprise APIs across HRMS, Visitor Management, and Time & Attendance systems, reducing response time by 35% for more than 500 daily users through targeted performance tuning.
 - Developed an Emirates ID card reader integration into the visitor management system, cutting check-in processing time and improving gate security compliance.
 - Implemented a QR code badge printing system for visitor management, eliminating manual badge creation and reducing gate access delays.
-

Mid-Level Software Engineer — Banking & FinTech

Winklin (Contracted to HBL Bank) | Pakistan | Oct 2022 – Oct 2023

- 96% performance improvement: Re-architected merchant blacklist screening using optimized indexing and query strategies, reducing processing time from more than four hours to ten minutes (96% improvement) and restoring merchant onboarding SLAs.
 - Collaborated with cross-functional teams to design and implement standardized merchant onboarding workflows for HBL digital payment products (QR and IPG), reducing manual onboarding effort by approximately 60% while improving onboarding consistency.
 - Replaced third-party PaySky mPOS system with an in-house ASP.NET Core solution for IPG merchants, reducing licensing cost and enabling custom payment flow control.
 - Integrated liveness facial recognition API for KYC/AML compliance in the digital onboarding pipeline.
-

Software Engineer

KCompute (Private) Ltd | Pakistan | Sep 2020 – Sep 2022

- Maintained and enhanced enterprise .NET applications supporting the GoldenCare Long-Term Care and Medicare insurance platform, resolving 5–10 Jira tickets daily across bug fixes, feature enhancements, and performance optimization while ensuring application stability and timely delivery.
 - Partnered with QA and business stakeholders to deliver high-quality software releases by resolving production issues, supporting User Acceptance Testing (UAT), and implementing application performance improvements that enhanced the reliability and responsiveness of the SurView.ae platform.
 - Designed and implemented an automated low-rating feedback notification system that generated real-time email alerts for survey creators and platform administrators, improving customer satisfaction monitoring and accelerating response to negative feedback.
 - Developed a customizable image-based rating feature, allowing clients to replace standard emoji ratings with organization-specific branded images, improving user experience and supporting customer branding requirements.
-

EDUCATION

Bachelor of Science in Computer Science (BSCS)

University of Sindh, Jamshoro

Graduated: December 2021

CERTIFICATIONS & PROFESSIONAL DEVELOPMENT

Professional Development (Currently Pursuing):

Microsoft Dynamics 365 CRM | Docker & Kubernetes | Blazor Server/WASM | Azure Cloud Services

Methodologies: Agile/Scrum, Test-Driven Development, CI/CD Best Practices

KEY ACHIEVEMENTS AT A GLANCE

- 96% performance improvement: Reduced banking service processing from 4+ hours to 10 minutes
- 40% maintenance reduction: Modernized 3 core government legacy services to ASP.NET Core 8
- 35% API response improvement: Optimized HRMS systems serving 500+ daily users
- 60% effort reduction: Standardized digital onboarding for 2 payment products
- 80% manual outreach reduction: Automated transactional email workflows
- 4 payment gateways integrated: Ngenius, UAE Pay, Stripe, Naqodi
